

Please do not prohibit the public from benefitting from services like traffic & weather. It's bad enough that companies like Clear Channel are buying up all the terrestrial stations and we've had to listen to the same DJ's & music. I know they are a contributor to XM so they won't lose out on a great opportunity like satellite is. We need more variety offered to the public & we're getting less & less of it from so called "local" stations who give back only the bare minimum to their community. Satellite radio, whether XM or Sirius, gives us tons of new, fantastic choices that we've never received from the few stations in our town. Offering traffic & weather would further help satellite radio benefit the people regardless of where they live. Thanks to satellite, we no longer have to listen to 30 minutes of commercials to hear and enjoy music.
